

A guide to understanding The ACIR GPII20A Practice Report

Practices have recently received their 20A report that identifies children under 7 years of age attending each practice who are considered overdue for a childhood immunisation (according to ACIR at the report date).

General Practice Network South (**gpns**) has developed a guide to help practices use the report to monitor children's immunisation status, recall those who are overdue, reconcile practice and ACIR data and support maintaining coverage rates for your practice at 90% or more.

Download the Guide on our Immunisation page.

For further support with recalling overdue children, please contact our **gpns** Immunisation Coordinator, Karen Smith, on 8374 7000 or email karen.smith@gpns.org.au
